Lockheed Martin Space
Systems Integration Test Engineering Intern - Summer 2026
Littleton, CO

Dear Hiring Manager,

I am writing to demonstrate my interest in Systems Integration Test Engineering Intern role at Lockheed Martin Space for Summer 2026. Having the practical experience in the field of systems design, testing, and project integration as an Aerospace Engineering student in the University of Alabama Honors College, I am now looking forward to helping in your mission of offering innovative and dependable aerospace solutions.

I am currently employed as a Research Assistant in the University of Alabama Aerodynamics Research Laboratory, in which I am part of a quadcopter performance project that incorporates SolidWorks CAD design, SLA 3D printing, and Python data analysis. I am now working with a select team to build from the ground up a VTOL capable drone sponsored by Dr. Jinwei Shen and The Vertical Flight Society chapter here at UA. I have gained the skills to operate on both hardware and software interfaces and perform stringent testing procedures.

My internship with Wilson and Company also allowed me to experience the value of planning, implementing and documenting engineering solutions within real life conditions. I worked on a number of project plans and technical reports on infrastructure systems and showed interest in detail and working together with other teams of senior engineers.

My work as a founder of PowerPro Rentals LLC and hands-on technician personally restoring more than 65 watercrafts has helped me develop a distinct systems-thinking oriented mind. This entrepreneurial experience has taught me to improvise when faced with pressure, how to meet deadlines, and how every part of a system can be used to the best effect.

I also have knowledge of SolidWorks, Python, and MATLAB, and Microsoft Office, as well as have a solid understanding of mechanical systems, orbital mechanics, and circuitry. My success at school (3.61 GPA, full-ride scholarship, six-time Dean honoree and six time) demonstrates that I am disciplined and dedicated to excellence in engineering.

The mission of Lockheed Martin of tackling intricate global problems by creating systems innovations appeals strongly to me. I am eager to find a chance to make a significant contribution to the innovative projects of Lockheed Martin.

Sincerely,
Keelan O'Doherty
